EXPERIENCE

Equilibrium Energy

San Francisco, CA

Senior Staff Data Scientist

June 2024 - Present

- Lead development of evaluation frameworks and metrics for physics-based and probabilistic ML forecasts, building interactive reporting that compares models across regression, rare-event detection, and constraint metrics to drive model promotion and deployment decisions; adopted and extended by a 7-person data science team
- Initiated and led a leading-indicator risk signal that flags when a forecast is likely to fail, validated on backtests (highest-risk quartile showed ~2x the forecast error); pitched across science, product and trading as a production model input
- Analyze 5-min operational telemetry (state-of-charge, dispatch, settlement) against simulation to diagnose battery performance gaps, spike-capture misses, and their PnL impact
- Build diagnostic tooling that decomposes forecast error into underlying drivers, enabling self-service root-cause analysis of model misses and anomalies across thousands of locations
- Partnered with the agentic AI team to build a golden-question evaluation dataset with manually crafted reference solutions, calibrating the eval agent's rubric against expert judgment to improve evaluation quality
- Drive strategy development for new asset onboarding, including market analysis, optimization parameter tuning, and controlled forecast model comparisons that identified 8-10% profit uplift, quantifying confidence in model differences via stratified bootstrap resampling

Growing Energy Labs, Inc (Qcells Geli)

San Francisco, CA

Senior Data Science Analyst, Product

October 2019 - May 2023

- Evaluate impact of new random forest, kNN, and SARIMAX forecasting models and optimization features on energy storage revenues across multiple energy markets (CAISO, ERCOT, NYISO, ISO-NE)
- Serve as technical lead for energy analytics team by developing standardized workflows, maintaining shared code repositories, supporting junior analysts, and communicating new algorithmic features to product, other analysts, business development, and sales
- Evaluate weather forecast models and feature selection, ultimately guiding input model selection for production forecasting pipelines
- Formulate, run, and analyze energy storage simulations to aid data-driven decisions and quantify the energy storage value

Thornton Tomasetti

San Francisco, CA

Sustainability Senior Engineer

June 2015 - October 2019

- Develop web platform for water balance calculations, modeling building water demands & onsite supplies (rainwater, graywater, blackwater)
- Lead design and construction teams on energy, water, and material considerations for LEED certification

SKILLS

Data Science & ML: Python (pandas, numpy, sklearn, seaborn, matplotlib, PuLP, cvxpy), Databricks (PySpark, Spark SQL, MLflow), SQL (Postgres, Microsoft SQL Server), Time series forecasting (probabilistic/quantile methods, forecast calibration, random forest, kNN, SARIMAX), dbt, Hex, R

Software Engineering: Git, Workflow automation (Dagster, Metaflow, Airflow), CI/CD (Jenkins), Containerization (Basic Docker & Kubernetes), Cloud infrastructure (AWS), Claude Code/GPT/Cursor

Languages: English, Spanish, Hebrew

EDUCATION

University of California, Berkeley

M.S., Civil and Environmental Engineering - Energy, Civil Infrastructure, and Climate

August 2015 - May 2016

B.S., Environmental Engineering Science. Minor in Music

August 2011 - May 2015

ACHIEVEMENTS

Professional Engineer (PE), 2019 - Present

LEED AP BD+C, 2016 - Present

Women in Construction, Constructech Award, 2019

Author, Journal of Geophysical Research, 2014

Board Member, Golden Gate Running Club, 2025

Violinist, UCSF Strings Collaborative, 2017 - 2020

Violinist, UC Berkeley Symphony, 2013 - 2015
